**Subject:** ADEC Little Susitna TAH average spreadsheet  
**Attachments:** LS intensive Site LS-3 Aug data using diff values Nondetects.xlsx

As discussed during our teleconference attached is the 2009 and 2010 TAH data for the Little Susitna River calculating 3 day averages where the data was available. The tabs along the bottom use different values for nondetect results.

DEC conducted a 2-day sample event in June 2011 and in August 2012 we had a 4-day sample event. The 2012 4-day sample event had reduced boat traffic and the average was below criterion.

Thanks,

**Laura Eldred**, Environmental Program Specialist  
Alaska Department of Environmental Conservation  
Division of Water, Nonpoint Source Section
